Frontend Developer | Web Developer | React Developer

A web developer with a passion for bringing projects from conception to existence whether it be through programming or audio. With a well-rounded background in HTML and JavaScript for frontend along with Node.js and React.js for backend web development along with the C# for applications and video games. Thanks to the diversity of my background I have the ability to adapt my skills within a team that allows me to blend and connect with anyone.

Skills

Languages: JavaScript, TypeScript, HTML, CSS, C#
Database: MongoDB
Cloud/Technologies: Docker

Libraries: Bootstrap, JQuery, React, Threejs
Platforms: Visual Studios, VS Code, Atom

Professional Experience

Podcast Engineer/Producer   **July 2020 - July 2021**
Third Wheel Podcast Studio
- Use OBS for video recording or Live-Streaming
- With Adobe Audition the client's vocals are taped, edited and polished
- Give direction on where the conversation should be steered along with adding my voice when requested
- Using Premiere Pro to create intros, outros and insert any visual design the client requested

Freelance Web Developer   **August 2021 - Present**

Projects

Mr. Weather App   **2022**
Tech Stack: JavaScript, React, HTML, CSS, Node
- Designed with the capabilities to get and post weather forecasts of any city on the planet.
- Connected to a weather API through React's useState and useEffects to gather, update and post said information.
- With a tested 100% accurate forecast, this app will display all the information needed for a given location at the specific time the user requests that information.

Online Shop   **2022**
Tech Stack: JavaScript, EJS, CSS, Node, MongoDB
- Created for users to shop for unique items from different countries with Node.js and Express.js.
- Implemented through Express what items users could see and what items the admin profile could add or remove.
- With MongoDB, users' information is saved to a database and is needed whenever the user makes a purchase.

Robo-Friends   **2022**
Tech Stack: JavaScript, React.js, Node, HTML, CSS
- Reactive web page that allows you to search through the email addresses given
- As you search the page React is used to predicts what address you are looking for and eliminates the others
- Applied two different APIs to give each address its own unique avatar along with email address to use as placeholders

Education

Udemy Alumni   **2020 - Present**
Software Engineering, Specific Applications, JavaScript and Frontend Development, Full Stack Engineering

The Art Institute of Seattle   **2015-2019**
Bachelor's Degree of Science in Audio Production

Certificates
Paperwork
